Login Authentication Issue

Open

Users reporting 502 Bad Gateway during Google OAuth single sign-on redirect flow.

Conversation Thread

Hi support team, I'm trying to log in using my corporate Google account but getting a 502 Bad Gateway screen immediately after selecting the account. Multiple employees are reporting the same issue. Any updates?

Amit S. Agent

Hello John, thank you for reaching out. We have received your report. Our engineering team is currently investigating potential latency in the authentication redirect service. I will keep you posted as we narrow down the cause.

Thanks for the update. Is there a temporary workaround we can use? It is blocking some of our urgent dashboard reports.

Google OAuth Endpoint Issue Confirmed by Amit S. (Support Agent) — 10/01/2024 at 11:45 AM

Confirmed that the client credentials redirect URI mismatches on our Google Cloud Console. Sending a PR to update dashboard redirect rules. Private escalation payload logged.

Workaround Provided via Direct Portal Redirect by Priya M. (Billing Support) — 10/01/2024 at 03:00 PM

Suggested reporter to log in directly via dashboard.cybersave.com using local system email as a temporary failover protocol. He confirmed this works for immediate needs.
